CRISPR: Innovation and Commercialisation in a Complex IP Environment.

Sally Davis, PhD

Associate | Davies Collison Cave

Dr Sally Davis is a patent attorney at Davies Collison Cave where she is involved in preparing and prosecuting patent applications related to molecular biology, cell biology, genetics, precision medicine and diagnostics. She assists clients in developing patent strategies that align with their research and commercial objectives to maximise the value of patent portfolios in the global market.

Prior to commencing at DCC, Sally completed her PhD at the Peter MacCallum Cancer Centre. Her studies spanned a number of key disciplines including genetics, genomics, high-throughput screening, RNA interference and targeted therapeutic development. During the course of her studies, she identified a number of genes that may be targeted for the treatment of ovarian cancer. Results from her research have been published in peer-reviewed scientific journals and presented at international conferences.
