

Primary Aldosteronism
Centre of Excellence

Sonali Shah, Endocrinologist at Monash health and PhD candidate with Centre of Endocrinology and Reproductive Health, Hudson Institute of Medical Research

Attending US ENDO 2025, the 46th International Aldosterone Conference, and the Adrenal Alliance (A5) Symposia in San Francisco last year has been invaluable to my professional development. I am grateful to the PACE Research Capacity-Building Travel Award for making this possible. Their generous support enabled me to participate in these three international meetings and engage with a global community of endocrine researchers.

US ENDO 2025 was particularly impactful, not only because it was my first time attending such a large conference, but also because I had the privilege of sharing aspects of our research on low-renin hypertension – an increasingly recognised subtype. Equally meaningful was the opportunity to be exposed to the latest developments in adrenal disorders, hypertension mechanisms, and emerging therapies. Engaging with specialists whose work shapes the field broadened my perspective on endocrine hypertension, highlighting new research directions and collaborative opportunities. These experiences reflect the scientific exchange and networking that PACE supports.
